SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IRB: Materials and Methods Twenty deidentified primary canines were selected, in accordance with the ethical treatment of human tissue ethical committee IRB approval 1818, from freshly extracted for orthodontic reasons without any visible caries, WSLs, cracks, or fractures under a stereoscopic microscope (Meiji, Japan) at x2 magnification.
Inclusion and Exclusion Criteria
not detected.
Attrition
not detected.
Sex as a biological variable
not detected.
Subject Demographics
Age: not detected.
Weight: not detected.
Randomization
Specimens were then randomly divided into two groups as follows: Group 1: Novamin containing paste NUPRO (Prophylaxis Paste with NovaMin Dentsply International, United States Table 1)
Blinding
not detected.
Power Analysis
not detected.
Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
Data were analyzed using SPSS version 23 (IBM Corp .	SPSS		Suggestion: SPSS, RRID:SCR_002865(link)

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
Statistical Analysis Kolmogorov-Simonov was used to determine if the data were normally distributed.	Kolmogorov-Simonov
Mann-Whitney U test was used to identify statistically significant differences in enamel microhardness between intact and demineralized specimens , and between demineralized and remineralized samples treated with NUPRO paste and DEFEND paste and the difference between NUPRO paste and DEFEND fluoride paste as a remineralization agent .	Mann-Whitney U test

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
