Document Identifier: **PMC8385598**

SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
Consent: We obtained the contact details of potential participants from facility managers , after obtaining consent for the study from the state health authorities to assess the effectiveness of the e-Learning intervention .
IRB: Ethics approval The study protocol was approved by the National Health Ethics Review Committee of Nigeria with assigned number NHREC01012007.
Inclusion and Exclusion Criteria
Participants Eligible participants were doctors , nurses , midwives , laboratory technicians , pharmacists , community health officers (CHO) and Community Health Extension Workers (CHEW) drawn from 275 health facilities across 25 states of Nigeria (Figure 1) .
Attrition
not detected.
Sex as a biological variable
not detected.
Subject Demographics
Age: not detected.
Weight: not detected.
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.
Replication

not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
The Shapiro-Wilk test and Levenes test were used to test for normality and the homogeneity of variance of the pre-test and post-test scores.	Shapiro-Wilk test
	Levenes test
An independent t-test was used to summarise the mean and standard deviation (SD) of the pre-test and post-test scores of the participants, whose selection was independent of each other.	t-test
One-way ANOVA was used to compare the mean pre-test and post-test scores between the independent variables.	ANOVA

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
