SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
not required.
Inclusion and Exclusion Criteria
not required.
Attrition
not required.
Sex as a biological variable
not required.
Subject Demographics
Age: not required.
Weight: not required.
Randomization
not required.
Blinding
not required.
Power Analysis
not required.
Replication
not required.

Table 2: Key Resources Table

The Toda-Yamamoto approach ensures a chi-square (documentclass12ptminimal usepackagewasysym usepackagesubstackamsmath usepackageamsfonts usepackageamssymb usepackageamsbsy usepackagemathscreucal usepackagemathrsfs DeclareFontFamilyT1linotext DeclareFontShapeT1linotextmn linotext DeclareSymbolFontlinotextT1linotextmn DeclareSymbolFontAlphabetmathLINOTEXTlinotext begindocument chi 2) enddocument asymptotic distribution for inference analysis.	chi-square

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.

For a full description of scored criteria and tips for improving your score, please see https://www.scicrunch.com/sciscorereport-faq
