# SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

**Table 1: Rigor Adherence Table**

| |
|---|
| Ethics |
| Field Sample Permit: It was conducted in metropolitan, regional and rural locations across NSW. |
| IRB: The project was approved by the Aboriginal Health & Medical Research Council of NSW Human Research Ethics Committee (Reference number 151119). 2.2 Inclusion and exclusion The research population was women living in NSW who identified as Aboriginal and or Torres Strait Islander and aged between 24 and 74 years. |
| Consent: Prior to participating in the research, participants provided verbal consent to the information provided being used in a de-identified form, in line with ethics processes. |
| Inclusion and Exclusion Criteria |
| Women were excluded if they were not in the target age range, had participated in market research in the previous six months or had a total hysterectomy. |
| Attrition |
| not detected. |
| Sex as a biological variable |
| A total of 94 women participated in the research (Table 1). |
| Subject Demographics |
| Age: not detected. |
| Weight: not detected. |
| Randomization |
| not detected. |
| Blinding |
| not detected. |
| Power Analysis |
| not detected. |

| Replication |
| --- |
| not required. |

**Table 2: Key Resources Table**

| Your Sentences | REAGENT or RESOURCE | SOURCE | IDENTIFIER |
|---|---|---|---|

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
