SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics	
IRB: This study was approved by the ethical board of our institute.	
Inclusion and Exclusion Criteria	
not detected.	
Attrition	
not detected.	
Sex as a biological variable	
not detected.	
Subject Demographics	
Age: not detected.	
Weight: not detected.	
Randomization	
not detected.	
Blinding	
not detected.	
Power Analysis	
A post hoc power analysis for detecting significant factors in the multiple linear regression analysis was performed using G*Power 3.1 (Heinrich-Heine-Universitat Dusseldorf) with .05 alpha error.	
Replication	
not required.	
Data Information	
Identifiers: A preserved joint space width of at least 2 mm was confirmed on standing	9,11,20

posteroanterior knee radiographs with the knee in 45deg of flexion (Rosenberg view). 9,11,20 Conversely, advanced arthrosis, which includes generalized grade 4 cartilage defects determined by the International Cartilage Repair Society (ICRS) grading system, 3 was a contraindication for MAT.	
Identifiers: Meniscal extrusion was defined as subluxation >3 mm. 15,17,27,29 Figure 1.	15,17,27,29

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
All statistical analyses were performed using SPSS v 21.0 (IBM Corp).	SPSS		Suggestion: SPSS, RRID:SCR_002865(link)
A post hoc power analysis for detecting significant factors in the multiple linear regression analysis was performed using G*Power 3.1 (Heinrich-Heine-Universitat Dusseldorf) with .05 alpha error.	G*Power		Suggestion: G*Power, RRID:SCR_013726(link)

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
12 The Student t test or Mann-Whitney U test was used to compare the Lysholm scores between the groups according to the degree and location of allograft SI, the morphology of allograft, and cartilage status.	t test
	Mann-Whitney U test
The distribution of SI was analyzed using the Pearson chi-square test.	chi-square test

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
