SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
Consent: Participants agreed to inclusion in the study after being informed that their data would be published if they gave their consent to participate.
IRB: This study was approved by the regional ethics board.
Inclusion and Exclusion Criteria
We excluded participants with certain medical conditions, such as those who had already been diagnosed with CuTS, those who had received surgical treatment for CuTS, those who had a history of elbow trauma, and those who had any systemic disorder, such as diabetes mellitus, connective tissue disorders, and polyneuropathy. (Fig. 1).
Attrition
not detected.
Sex as a biological variable
Materials and methods Participants Medical examinations of residents of a mountain village in Japan (total population of 4,410, comprising 2164 men and 2246 women in 2019) are regularly conducted for the early detection of cancer and to prevent lifestyle-related diseases.
Subject Demographics
Age: Of these 956 residents, 160 (46 men, 114 women mean age 65.4 years range, 20-88 years) underwent an orthopedic examination for this study by their own choice.
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.
Replication

not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
Using an analysis of variance or Steel-Dwass test, we compared the age, height, weight, body mass index, grip strength, key pinch strength, fat mass percentage, UNCSA at 4 cm and 1 cm proximal to the ME, UNCSA at 5 cm distal to the ME, PREE Pain score, PREE Functional score, and PREE Total score among the 3 groups.	analysis of variance
	Steel-Dwass test
The gender differences in the three subject groups were compared using a chi-square test.	chi-square test

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
