SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IRB: Methods Study Sample After institutional review board approval was received, study patients were identified from an operative departmental database.
Inclusion and Exclusion Criteria
not detected.
Attrition
not detected.
Sex as a biological variable
To maximize external validity and to ensure an even representation across the larger study sample, the size of each age subgroup (6-year-olds, 7-year-olds, etc) and sex subgroup (female and male) was restricted to a maximum of 30 patients.
Subject Demographics
Age: Patients included in this study had to have undergone ACL reconstructive surgery between July 2008 and July 2018, be younger than 16 years of age, and have records of skeletal age and a knee radiograph within a 3-month span (Figure 1).
Randomization
When >30 patients fit subgroup criteria, a random number generator was used to select the 30 patients to include.
Blinding
Study Design Both skeletal age and tibial apophyseal staging were recorded by 2 independent , blinded raters reading deidentified radiographs using a Synapse PACS system (Fujifilm Medical Systems)
Power Analysis
not detected.
Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
The strength of the correlation between mean skeletal age and modal apophyseal age was indicated with the Spearman correlation coefficient (r S) .	Spearman correlation

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
