SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IRB: The project was approved by the Institutional Research Ethic Board, and all participants provided written informed consents.
Inclusion and Exclusion Criteria
All participants were recruited from community health centers in Suzhou, Jiangsu province in the Southeastern China.
Attrition
not detected.
Sex as a biological variable
A total of 940 subjects were excluded from analyses by adopting the following exclusion factors: 1) The history of endocrine diseases, including parathyroidism, hypothyroidism, hyperthyroidism major gastrointestinal operations renal inadequacy anemia depression and malignant tumors etc.
Subject Demographics
Age: Materials and Methods Study Subjects A total of 4689 Chinese aged >=65 years were enrolled in our ongoing Osteoporosis Preventive Project (OPP).
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.
Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
