Document Identifier: **PMC8435056**

SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
Field Sample Permit: Step 2: identify relevant literature The search strategy was approved by 2 authors (AEW and MDO) and involved a search of peer-reviewed English literature that was completed in July 2020 within 6 primary literature databases: PubMed, CINAHL, Web of Science, ProQuest, Scopus, and Agricola.
Inclusion and Exclusion Criteria
Inclusion criteria included full-text, peer-reviewed, English articles published between 1970 and 2020 describing studies that employed systems science within nutrition D&I research.
Attrition
The qualitative data analysis was conducted by 2 trained researchers (AEW and RAW), one of whom generated initial codes that informed a coding dictionary and then developed themes to generate summative content.
Sex as a biological variable
not required.
Subject Demographics
Age: not required.
Weight: not required.
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.
Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
Step 2: identify relevant literature The search strategy was approved by 2 authors (AEW and MDO) and involved a search of peer-reviewed English literature that was completed in July 2020 within 6 primary literature databases: PubMed, CINAHL, Web of Science, ProQuest, Scopus, and Agricola.	PubMed		Suggestion: PubMed (RRID:SCR_004846)(link)
	ProQuest		Suggestion: ProQuest (RRID:SCR_006093)(link)
	Agricola		Suggestion: AGRICOLA (RRID:SCR_008158)(link)
Medical subject headings (MeSH) and keywords that were mapped to subject headings were used to define the searchs scope to best capture relevant articles.	MeSH		Suggestion: MeSH (RRID:SCR_004750)(link)
Step 5: collate, summarize, and report results Descriptive statistics including frequency counts of study description categories including: systems science methods, tools and ideologies, intervention types (i.e., planning, evaluation, implementation, dissemination), and explicitly mentioned theory, models, and frameworks used in the included articles study designs were calculated using JMP Pro 14 (SAS Institute Inc).	SAS Institute		Suggestion: Statistical Analysis System, RRID:SCR_008567(link)

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
