SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IRB: METHODS The study was approved by the Institutional Review Board of Asan Medical Center, Seoul, Korea (2011-0466) and was conducted in the laboratory and medical ICU at Asan Medical Center with 18 medical ICU beds for 3 months.

Statistical Tests	
Using the chi-square test, we evaluated the antimicrobial activity on the tested metal surfaces assuming that a decreased colony count means higher antimicrobial activity.	chi-square test

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
