SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IRB: The study protocol conformed to the tenets of the Declaration of Helsinki and was approved by the local Ethics Committee of the University of Siena (Reference No. 14951).
Consent: Written informed consent for using clinical data for research purposes was obtained according to the local Institutional review board guidelines.
Inclusion and Exclusion Criteria
25 The presence of other gene mutations better explaining the clinical phenotype was an exclusion criterion.
Attrition
not detected.
Sex as a biological variable
not detected.
Subject Demographics
Weight: As for the posology of the IL-1 inhibitors, we defined standard dosages the following ones: ANA 100 mgday (weight > 50 kg) or 1-2 mgkgday (weight < 50 kg) CAN 150 mg (weight > 40 kg) or 2 mgkg (weight > 40 kg) every 4 weeks.
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.
Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
