SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
Consent: The study protocol and its significance were explained in detail to each subject and a written, informed consent was obtained from all before their inclusion into the study.
IRB: The structure and plan of the study was sent to the Ethics Committee of the Institution before the start of the study and their approval sought via.
Inclusion and Exclusion Criteria
The patients who had a known history of other systemic illnesses including gout and renal disorders or, who were undergoing treatment for the same, had radiotherapy treatment in the past were excluded from the study.
Attrition
not detected.
Sex as a biological variable
Material and Methods The present study consisted of 300 subjects within an age range of 25 to 65 years who were divided into two groups: study group consisting of 150 patients, including 113 males and 37 females, and 150 age- and sex-matched healthy controls.
Subject Demographics
Age: Material and Methods The present study consisted of 300 subjects within an age range of 25 to 65 years who were divided into two groups: study group consisting of 150 patients, including 113 males and 37 females, and 150 age- and sex-matched healthy controls.
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.
Replication

not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
