Document Identifier: **PMC8453176**

SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IRB: This study was approved by the Ethics Committee of Fuwai Hospital of the Chinese Academy of Medical Sciences, Shenzhen, China. Data Collection and Definitions The sampling procedure was performed by reviewing the electronic medical records of the Fuwai Hospital Chinese Academy of Medical Sciences and screening the population based on the inclusion and exclusion criteria.
Inclusion and Exclusion Criteria
The exclusion criteria were as follows: 1) non-adult patients (<18 years) 2) patients with autoimmune, allergic, or infectious diseases that affect the EMR.
Attrition
not detected.
Sex as a biological variable
not detected.
Subject Demographics
Age: not detected.
Weight: not detected.
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.
Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
The chi-square or Fishers exact tests were used to analyze the differences in the categorical variables between the groups.	chi-square
	Fishers exact tests
The ANOVA or Kruskal-Wallis H-tests were used to analyze the differences in the continuous variables between the groups.	ANOVA
	Kruskal-Wallis H-tests
The difference in the event incidences among the three EMR groups was determined using the Log rank test.	Log rank test
The Cochran-Armitage test was used to determine the correlation between the EMR and clinical outcomes.	Cochran-Armitage test

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
