SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
not required.
Inclusion and Exclusion Criteria
not required.
Attrition
not required.
Sex as a biological variable
not required.
Subject Demographics
Age: not required.
Weight: not required.
Randomization
In the presence of missing values (missing completely at random), the results can be interpreted like repeated measures ANOVA.
Blinding
not detected.
Power Analysis
not detected.
Replication
In this way all treatments (test material vs refreshment rate) were created in triplicate.
Number: In this way all treatments (test material vs refreshment rate) were created in triplicate.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
Data handling and statistical analyses All statistical analyses were performed by applying built-in functions of the software package GraphPad Prism (Ver 8.2.1).	GraphPad Prism		
GraphPad Prism was also used for preparation of all figures.	GraphPad		Suggestion: GraphPad Prism, RRID:SCR_002798(link)

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
In the absence of missing values, this method gives the same p values and multiple comparisons tests as repeated measures analysis of variance (ANOVA).	analysis of variance
	ANOVA
When treatment effects were statistically significant ($p < 0.05$), Dunnetts multiple comparisons test was applied to compare data from the pebble treatment with that of the rock and slag treatments.	Dunnetts multiple comparisons test
After normality of these data sets was confirmed with the Shapiro-Wilk test, the significance of differences between treatments was tested with Welchs ANOVA.	Shapiro-Wilk test
	Welchs ANOVA

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.

For a full description of scored criteria and tips for improving your score, please see https://www.scicrunch.com/sciscorereport-faq
