Document Identifier: **PMC8477885**

SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IRB: The institutional review committee at each participating center approved the study , and all participants provided informed consent .
Consent: The institutional review committee at each participating center approved the study , and all participants provided informed consent .
Inclusion and Exclusion Criteria
Following the methodology used in the development of the PCE , we excluded individuals aged >79 years because complex age interactions were found above this age cutoff during the development of the PCE .
Attrition
not detected.
Sex as a biological variable
8 , 9 , 10 Briefly, ARIC is a cohort of 15 792 White and Black men and women aged 45-64 years at enrollment who were recruited from 4 field centers (Minneapolis, MN Washington
Subject Demographics
Age: 8 , 9 , 10 Briefly, ARIC is a cohort of 15 792 White and Black men and women aged 45-64 years at enrollment who were recruited from 4 field centers (Minneapolis, MN Washington
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.
Replication
not required.

Data Information
Availability: METHODS Participants All data used in this analysis are publicly available by request from the National Heart, Lung, and Blood Institute (NHLBI) repository.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Experimental Models: Organisms/Strains			
8 , 9 , 10 Briefly, ARIC is a cohort of 15 792 White and Black men and women aged 45-64 years at enrollment who were recruited from 4 field centers (Minneapolis, MN Washington	792 White		
The CHS original cohort is an elderly population of 5201 White and Black men and women aged >=65 years from 4 field centers (Washington County , MD Forsyth County	5201 White		
MESA is a more ethnically diverse cohort of 6814 men and women aged 45-84 years from 6 sites (Baltimore City and Baltimore County , MD Chicago , IL Forsyth County , NC Los Angeles County , CA New York , NY and St . Paul , MN) and included 38 White , 28 Black , 23 Hispanic , and 11 Chinese participants who were enrolled between 2000 and 2002 .	38 White		
Risk estimates for Hispanic and Asian American participants were calculated using the equation for non-Hispanic White participants of the same sex as recommended by the risk-assessment working group.	non-Hispanic White		
Software and Algorithms			
All analyses were performed using Stata 16 (StataCorp, College Station, TX), and a 2-tailed P value <0.05 was considered statistically significant.	StataCorp		Suggestion: Stata, RRID:SCR_012763(link)

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.

For a full description of scored criteria and tips for improving your score, please see https://www.scicrunch.com/sciscorereport-faq
