Document Identifier: **PMC8484398**

SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IRB: Methods Participants The study was performed in two dermatology clinics in Italy and was approved by the ethical committee of the University of Campania, Naples, Italy; written informed consent was requested and received from all subjects in the study.
Consent: Methods Participants The study was performed in two dermatology clinics in Italy and was approved by the ethical committee of the University of Campania, Naples, Italy; written informed consent was requested and received from all subjects in the study.
Inclusion and Exclusion Criteria
Inclusion criteria were the following: grade 3 AKs, with ≥ 3 lesions located in the same anatomical region (within a contiguous 50 cm2 area on the face, bold scalp, forehead, arms; the 50 cm2 area could be of any dimension, e.g., 7 × 7 cm, 6 × 8.3 cm, 4 × 12.5 cm); female or male > 18 years of age; skin type I to III according to Fitzpatrick; patient has confirmed his/her willingness to participate in this study.
Attrition
A total of 70 subjects were enrolled.
Sex as a biological variable
Inclusion criteria were the following: grade 3 AKs, with ≥ 3 lesions located in the same anatomical region (within a contiguous 50 cm2 area on the face, bold scalp, forehead, arms; the 50 cm2 area could be of any dimension, e.g., 7 × 7 cm, 6 × 8.3 cm, 4 × 12.5 cm); female or male > 18 years of age; skin type I to III according to Fitzpatrick; patient has confirmed his/her willingness to participate in this study.
Subject Demographics
Age: not detected.
Weight: not detected.
Randomization
Following medical history and verification of AK, the subjects were randomized to one of the two treatment groups.
Blinding

not detected.
Power Analysis
RCM images of the areas selected at baseline were acquired using a laser scanning device (VivaScope 1500; Caliber I.D., Ronchester, NY, USA) that scans the skin horizontally from the epidermis up to the papillary dermis (diode laser, 830-nm laser beam with a maximum power of 35 mW).
Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
Statistical Analysis and Sample Size Statistical analysis was performed using GraphPad statistical software version 13.0 (La Jolla, CA, USA).	GraphPad		Suggestion: GraphPad Prism, RRID:SCR_002798(link)

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
This variable was analyzed using a non-parametric test (Wilcoxon rank-sum test).	Wilcoxon rank-sum test
The secondary endpoints concerning AK lesions were analyzed using Fisher's exact test; 95% confidence interval for the between-group difference in percentages is provided.	Fisher's exact test
Change from baseline in the BSI, change from baseline in the target area clinical assessment, and change from baseline in RCM score of the target area and RCM score of cancerization field at the end of the treatment period were compared between the groups using a t test; 95% confidence interval for the between-group difference is provided.	t test

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
