Document Identifier: **PMC8486494**

SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
Consent: Participants provided consent prior to the collection of responses, and were not asked any personally identifying information.
IRB: All materials were approved by the Purdue University Institutional Review Board (IRB-2020-646).
Inclusion and Exclusion Criteria
not detected.
Attrition
not detected.
Sex as a biological variable
not detected.
Subject Demographics
Age: Statistical analysis Descriptive characteristics were analyzed for dichotomous or ordinal-level data for the following: US region (Northeast, Midwest, South, and West) shelter-in-place or stay-at-home regulationorder at the time of survey response (yesno) living with a spousepartner (yesno) number of children <18 y of age (n) respondents level of education and spousepartners level of education (high school graduate or less, some college or associate degree, college degree, graduate degree or above) household income prior to regulations (<50,000, 50,000 to <100,000, >=100,000) loss of employment or reduced pay of either (or both) caregiver(s) (yesno) household food insecurity (yesno) sex of the child (malefemale), age of the child (years), age of ASD diagnosis (years), raceHispanic origin of the child (non-Hispanic White, non-Hispanic Black, Hispanic or Latino, mixed, or other race) childs weight status (underweight, healthy weight, overweight, or obese) and childs current educational setting (attending school in person, home-schooled, receiving virtual instruction, or not receiving any instruction not receiving instruction included children who did have access but were not utilizing or engaging in this method of instruction).
Randomization
not detected.
Blinding
not detected.

Power Analysis
not detected.
Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Experimental Models: Organisms/Strains			
Statistical analysis Descriptive characteristics were analyzed for dichotomous or ordinal-level data for the following: US region (Northeast, Midwest, South, and West) shelter-in-place or stay-at-home regulationorder at the time of survey response (yesno) living with a spousepartner (yesno) number of children <18 y of age (n) respondents level of education and spousepartners level of education (high school graduate or less, some college or associate degree, college degree, graduate degree or above) household income prior to regulations (<50,000, 50,000 to <100,000, >=100,000) loss of employment or reduced pay of either (or both) caregiver(s) (yesno) household food insecurity (yesno) sex of the child (malefemale), age of the child (years), age of ASD diagnosis (years), raceHispanic origin of the child (non-Hispanic White, non-Hispanic Black, Hispanic or Latino, mixed, or other race) childs weight status (underweight, healthy weight, overweight, or obese) and childs current educational setting (attending school in person, home-schooled, receiving virtual instruction, or not receiving any instruction not receiving instruction included children who did have access but were not utilizing or engaging in this method of instruction).	non-Hispanic White		

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
Descriptive statistics were analyzed using t tests and chi-square tests, using Fishers exact tests where required.	t tests
	chi-square tests
	Fishers exact tests
Multiple analysis of variance (MANOVA) test for repeated measures was used for comparing the frequency of consumption of different food groups.	Multiple analysis of variance
	MANOVA

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.

For a full description of scored criteria and tips for improving your score, please see https://www.scicrunch.com/sciscorereport-faq
