SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IRB: The survey protocols for KNHANES VI were approved by the Institutional Review Board of the KCDC, and informed consent was obtained from all participants. 2. Variables and Measurements 1) Assessment of near work time In the KNHANES, the participants were asked, How many hours per day on average did you spend on near work (e.g., computer work or reading) in the past year?
Consent: The survey protocols for KNHANES VI were approved by the Institutional Review Board of the KCDC, and informed consent was obtained from all participants. 2. Variables and Measurements 1) Assessment of near work time In the KNHANES, the participants were asked, How many hours per day on average did you spend on near work (e.g., computer work or reading) in the past year?
Inclusion and Exclusion Criteria
not detected.
Attrition
not detected.
Sex as a biological variable
not detected.
Subject Demographics
Age: Of the 7,559 participants, 1,551 workers aged 19-49 years were selected.
Weight: The degree of obesity was divided into three categories: low (BMI <23.0 kgm2), normal (BMI 23.0-24.9 kgm2), and obese (BMI >=25.0 kgm2).
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.

Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
All statistical analyses were performed using IBM SPSS ver. 25.0 (IBM Corp., Armonk, NY, USA).	SPSS		Suggestion: SPSS, RRID:SCR_002865(link)

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
Finally, based on the working hours, four groups were formed: (1) <40 hours, (2) 40-49 hours, (3) 50-59 hours, and (4) >=60 hours. 3. Statistical Analysis We conducted chi-square tests (kh2 tests) and logistic regression analyses to compare the characteristics of participants according to near work time.	chi-square tests

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
