Document Identifier: **PMC8502712**

SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IRB: The Ethics Committee at our institution approved the study (number 682659) and written informed consent was obtained from all participants.
Consent: The Ethics Committee at our institution approved the study (number 682659) and written informed consent was obtained from all participants.
Inclusion and Exclusion Criteria
We interviewed 632 subjects, and 515 underwent DXA and met eligibility criteria for this analysis.
Attrition
not detected.
Sex as a biological variable
2.4 Statistical analysis Analyses were performed on the entire sample population, and we subsequently divided the four groups (under 80 y and 80 y or older, and men and women), to determine if the effect of age and gender were relevant.
Subject Demographics
Age: not detected.
Weight: not detected.
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.
Replication

not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
SPSS version 22.0 (SPSS, Inc., Chicago, IL, USA) statistical software was used for all analyses.	SPSS		Suggestion: SPSS, RRID:SCR_002865(link)

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
To compare the groups, the chi-square was used for qualitative variables, and analysis of variance was used for quantitative variables.	chi-square
	analysis of variance
Generalized estimating equations with the McNeamer test were used to assess the relevance of the sensitivity of the DFF and SPF criteria.	McNeamer test

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.

For a full description of scored criteria and tips for improving your score, please see https://www.scicrunch.com/sciscorereport-faq
