Materials Design Analysis Reporting (MDAR) Checklist for Authors

The MDAR framework establishes a minimum set of requirements in transparent reporting applicable to studies in the life sciences (see Statement of Task: doi:10.31222/osf.oio/9sm4x.). The MDAR checklist is a tool for authors, editors and others seeking to adopt the MDAR framework for transparent reporting in manuscripts and other outputs. Please refer to the MDAR Elaboration Document for additional context for the MDAR framework.

Materials

Antibodies	Yes (indicate where provided: page no/section/legend)	n/a
For commercial reagents, provide supplier name, catalogue number and RRID, if available	Yes, 3 antibodies detected, 1 RRID provided Suggestion: RRID:AB_2661829 : anti-human CD56 : CD4 : PerCP-Cyanine5.5 Please add identifiers for all resources where possible	

Cell Materials	Yes (indicate where provided: page no/section/legend)	n/a
Cell lines: Provide species information, strain. Provide accession number in repository OR supplier name, catalog number, clone number, OR RRID	No cell lines detected Please add identifiers for all resources where possible	
Primary cultures: Provide species, strain, sex of origin, genetic modification status.	Not currently checked by SciScore	

Experimental Animals	Yes (indicate where provided: page no/section/legend)	n/a
Laboratory animals: Provide species, strain, sex, age, genetic modification status. Provide accession number in repository OR supplier name, catalog number, clone number, OR RRID	No organisms detected Please add identifiers for all resources where possible	
Animal observed in or captured from the field: Provide species, sex and age where possible	Not currently checked by SciScore	
Model organisms: Provide Accession number in repository (where relevant) OR RRID	See laboratory animals section for information.	

Plants and microbes	Yes (indicate where provided: page no/section/legend)	n/a
Plants: provide species and strain, unique accession number if available, and source (including location for collected wild specimens)	Not currently checked by SciScore	
Microbes: provide species and strain, unique accession number if available, and source	Not currently checked by SciScore	

Human research participants	Yes (indicate where provided: page no/section/legend)	n/a
Identify authority granting ethics approval (IRB or equivalent committee(s), provide reference number for approval.	Our work with human biological samples was approved by the ethics committee of the Peking University Health Science Center and complies with the World Medical Association Declaration of Helsinki: Ethical Principles for Medical Research Involving Human Subjects.	
Provide statement confirming informed consent obtained from study participants.	MATERIALS AND METHODS Ethical considerations All patients gave written informed consent.	
Report on age and sex for all study participants.	**Age:**not detected. **Sex:**TABLE 1 Patient information Clinical features Cases Percentages Age <62 50 46.7 >=62 57 53.3 Gender Male 84 78.5 Female 23 21.5 Diagnose Squamous carcinoma 25 23.6 Adenocarcinoma 43 40.6 Small cell lung cancer 33 31.1 Clinical stage I 3 2.9 II 2 4.8 III 36 34.3 IV 64 61.0 Distant metastasis Yes 68 23.6 No 21 76.4 Liver metastasis Yes 18 20.2 No 71 79.8 Brain metastasis Yes 11 12.4 No 78 87.6 Family history Yes 32 36.0 No 57 64.0 Smoking history Yes	

Human research participants	Yes (indicate where provided: page no/section/legend)	n/a
	66 67.3 None 32 32.7 Drinking history Yes 49 50.5 None 48 49.5 We collected and recorded the clinical and treatment data of all patients.	

Design

Study protocol	Yes (indicate where provided: page no/section/legend)	n/a
For clinical trials, provide the trial registration number OR cite DOI in manuscript.	Not detected.	

Laboratory protocol	Yes (indicate where provided: page no/section/legend)	n/a
Provide DOI or other citation details if detailed step-by-step protocols are available.	Not detected.	

Experimental study design (statistics details)	Yes (indicate where provided: page no/section/legend)	n/a
State whether and how the following have been done, or if they were not carried out		
Sample size determination	not detected.	
Randomization	not detected.	
Blinding	not detected.	
inclusion/exclusion criteria	The inclusion criteria for the patients studied were as follows: (1) histopathological diagnosed non-small-cell lung carcinoma (NSCLC) or small-cell lung carcinoma (SCLC) with a survival expectancy not less than 3 months from the time of diagnosis (2) tumor stage and ultimate efficacy evaluated using imaging data, including that obtained by cranial magnetic resonance imaging and computed tomography (CT) of the chest and abdomen (3) routine blood tests performed at the Clinical Laboratory Department of Peking University Third Hospital from which peripheral blood cell composition could be determined, with eligible blood samples having been collected a week prior to treatment in patients with no history of hormone therapy or co-infections with infectious fever (4) eligibility for chemotherapy based on indices obtained through blood routine tests and biochemistry, such as electrolytes, liver and kidney function, and myocardial enzymes (5) an Eastern Cooperative Oncology Group performance status of <=2 and (6) written informed consent for voluntary participation in chemotherapy and regular follow-up.	

Sample definition and in-laboratory replication	Yes (indicate where provided: page no/section/legend)	n/a
State number of times the experiment was replicated in laboratory	Not detected.	
Define whether data describe technical or biological replicates	Not detected.	

Ethics	Yes (indicate where provided: page no/section/legend)	n/a
Studies involving human participants: State details of authority granting ethics approval (IRB or equivalent committee(s), provide reference number for approval.	Our work with human biological samples was approved by the ethics committee of the Peking University Health Science Center and complies with the World Medical Association Declaration of Helsinki: Ethical Principles for Medical Research Involving Human Subjects.	
Studies involving experimental animals: State details of authority granting ethics approval (IRB or	Not detected.	

Ethics	Yes (indicate where provided: page no/section/legend)	n/a
equivalent committee(s), provide reference number for approval.		
Studies involving specimen and field samples: State if relevant permits obtained, provide details of authority approving study; if none were required, explain why.	Not detected.	

Dual Use Research of Concern (DURC)	Yes (indicate where provided: page no/section/legend)	n/a
If study is subject to dual use research of concern, state the authority granting approval and reference number for the regulatory approval	Not currently checked by SciScore	

Analysis

Attrition	Yes (indicate where provided: page no/section/legend)	n/a
State if sample or data point from the analysis is excluded, and whether the criteria for exclusion were determined and specified in advance.	not detected.	

Statistics	Yes (indicate where provided: page no/section/legend)	n/a
Describe statistical tests used and justify choice of tests.	For data with normal distributions, the t-test was used if the data were non-normally distributed or variances were not homogeneous, the nonparametric test method was used.	

Data availability	Yes (indicate where provided: page no/section/legend)	n/a
State whether newly created datasets are available, including protocols for access or restriction on access.	Not detected.	
If data are publicly available, provide accession number in repository or DOI or URL.	Not detected.	
If publicly available data are reused, provide accession number in repository or DOI or URL, where possible.	Not detected.	

Code availability	Yes (indicate where provided: page no/section/legend)	n/a
For all newly generated code and software essential for replicating the main findings of the study:		
State whether the code or software is available.	Not detected.	
If code is publicly available, provide accession number in repository, or DOI or URL.	Not detected.	

Analysis

Adherence to community standards	Yes (indicate where provided: page no/section/legend)	n/a
MDAR framework recommends adoption of discipline-specific guidelines, established and endorsed through community initiatives. Journals have their own policy about requiring specific guidelines and recommendations to complement MDAR.		
State if relevant guidelines (eg., ICMJE, MIBBI, ARRIVE) have been followed, and whether a checklist (eg., CONSORT, PRISMA, ARRIVE) is provided with the manuscript.	Not currently checked by SciScore
