Document Identifier: **PMC8531429**

SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
Field Sample Permit: MATERIALS AND METHODS Participants and study design The present cross-sectional study was conducted within the framework of the Prospective Epidemiological Research Studies in Iran (PERSIAN) Guilan Cohort Study (PGCS).
IRB: Our experimental protocol was approved by the Ethics Committee of Guilan University of Medical Sciences (IR.GUMS.REC.1399.370) and conformed to the ethical principles set forth in the Declaration of Helsinki. Numeric and categorical variables were classified to sociodemographic information age, gender, body mass index (BMI), education, marital status, job, and habitat, medical information (signs of hypertension and CVDs), and food behavioral information (number of meals per day, added salt on the table, amount of salt added to food during preparation, use of fried foods, further use of remained frying oil, type of oil for frying, level of vegetables frying, storage of vegetables in the freezer, and use of infusion).
Inclusion and Exclusion Criteria
not detected.
Attrition
not detected.
Sex as a biological variable
It included 10,520 participants (4,887 men and 5,633 women between 35 and 70 years old) of Sowmeeh Sara County that is in northern Iran (Fig. 1).
Subject Demographics
Age: It included 10,520 participants (4,887 men and 5,633 women between 35 and 70 years old) of Sowmeeh Sara County that is in northern Iran (Fig. 1).
Randomization
not detected.
Blinding
not detected.
Power Analysis

not detected.
Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
Statistical procedure Statistical analysis was done by IBM SPSS statistics 26 (SPSS Inc., Chicago, IL, USA) and significant level of 0.05 was used.	SPSS		Suggestion: SPSS, RRID:SCR_002865(link)

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
To understand the association of the food behavioral parameters and hypertensionCVDs, chi-square test was done and parameters of Pearson chi-square value, Phi and Cramers V, and P-value were investigated.	chi-square test
	Pearson chi-square

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
