Document Identifier: **PMC8552567**

SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
Consent: All subjects provided written informed consent of a protocol approved by the local Institutional Review Board.
IRB: All subjects provided written informed consent of a protocol approved by the local Institutional Review Board.
Inclusion and Exclusion Criteria
Inclusion criteria included a diagnosis of sarcoidosis using standard criteria (25), an FEV1/FVC ratio of less than 80%, fibrosis on chest x-ray and/or high resolution computer tomography, have had at least two exacerbations of their sarcoidosis in the prior year.
Attrition
not detected.
Sex as a biological variable
not detected.
Subject Demographics
Age: Patients were between ages of 18 and 70 years of age.
Randomization
Using a random sequence generator with block randomization for each of the three sites, subjects were subsequently randomized at a 1:1 ratio to receive either roflumilast (ROF) 500 mcg daily or placebo (PLA).
Blinding
not detected.
Power Analysis
not detected.
Replication
not required.

Protocol Information	
Identifiers: The trial was registered on ClinTrials.org as NCT01830959 After obtaining consent, subjects underwent an initial evaluation including a focused physical examination and spirometry.	NCT01830959

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
Therefore, comparisons were made between the two treatment groups using the Student T test on subjects who were seen at least for three months of the study.	T test
Chi square analysis was used to calculate response rate.	Chi square

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.

For a full description of scored criteria and tips for improving your score, please see https://www.scicrunch.com/sciscorereport-faq
