Document Identifier: **PMC8554530**

SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IRB: All eligible patients were included in the study (census method) after ethical clearance was obtained from the Institutional Review Committee of the College of Health Sciences, Debre Markos University (Ref. ResComser&Post graCoorOff: 7811110) and verbal informed consent was obtained from the patients.
Consent: All eligible patients were included in the study (census method) after ethical clearance was obtained from the Institutional Review Committee of the College of Health Sciences, Debre Markos University (Ref. ResComser&Post graCoorOff: 7811110) and verbal informed consent was obtained from the patients.
Inclusion and Exclusion Criteria
2.3 Inclusion criteria and exclusion criteria All diabetic patients who fulfilled the inclusion criteria and registered from January, 1st 2016 to December 302020, in chronic care follow up clinic of Debre Markos compressive specialized hospital were included in the study.
Attrition
not detected.
Sex as a biological variable
not detected.
Subject Demographics
Age: 2.2 Population The population for this study were all adult (>=18 years old) diabetic patients who were registered in Debre Markos referral hospital for chronic follow-up care from January 1st, 2016 to December 2020.
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.

Replication
not required.
Cell Line Authentication
Authentication: Then by using the MRN of the diabetic patients their medical records were identified and their status was assessed for the development of EPTB starting from the date of diabetic follow up initiation (first follow-up visit) to the end of the study period using validated data collection checklists.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
We used Epi-data Version 4.1 for data entry and STATA Version 14 statistical software for data analysis.	STATA		Suggestion: Stata (RRID:SCR_012763)(link)

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
log rank test for significantly associated variables at the multivariable analysis (body mass index = 0.02, Past history of PTB = 0.001, age = 0.00, diabetic medication = 0.02 and alcoholic history = 0.02) and by graphically assessment method Finally, the outcomes of diabetic patients were dichotomized into censored or event categories.	log rank test

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
