SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IRB: 2.2 Study setting This study will be undertaken in the Illawarra-Shoalhaven Chronic Pain Service (I-SCPS), an outpatient clinic at the Port Kembla Hospital in New South Wales, Australia. Ethical approval for this study is pending following minor revision from the Illawarra and Shoalhaven Local Health District Ethics Committee (2020/ETH00096).
Consent: Informed consent will be obtained.
Inclusion and Exclusion Criteria
Participants will be recruited according to the following inclusion criteria: 1.
Attrition
not detected.
Sex as a biological variable
not detected.
Subject Demographics
Age: Aged 18 years or greater. 3.
Randomization
The trials will utilise a randomised, double-blinded, multiple crossover design using pregabalin as the intervention and gabapentin as the comparator.
Blinding
not detected.
Power Analysis
not detected.
Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
