Document Identifier: **PMC8560147**

SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
not required.
Inclusion and Exclusion Criteria
not required.
Attrition
22 Patients were randomized to 16 weeks of treatment with dupilumab + TCS or placebo + TCS. Outcomes The EQ-5D is the most commonly used standardized instrument for assessing generic HRQoL across a wide range of chronic conditions .
Sex as a biological variable
not detected.
Subject Demographics
Age: For inclusion in all trials, patients were required to be adults (18 years or older) with chronic AD for 3 years or more before screening and to meet the following criteria at baseline: an Investigators Global Assessment score of 3 or higher (on a 0- to 4-point Investigators Global Assessment scale), corresponding to at least moderate disease body surface area of AD involvement of 10 or greater an Eczema Area and Severity Index (EASI) score of 16 or higher (phase 2b, SOLO 1&2, and CHRONOS) or 20 or higher (CAFE) and a Pruritus Numerical Rating Scale (NRS) average score for maximum itch intensity of 3 or more (SOLO 1&2, CHRONOS).
Randomization
METHODS Study Design and Populations Data included in this report are post hoc analyses from published randomized, double-blind, placebo-controlled trials that evaluated the efficacy and safety of dupilumab for the treatment of adults with moderate-to-severe AD.
Blinding
not detected.
Power Analysis
not detected.

Replication	
not required.	
Protocol Information	
Identifiers: These studies included a phase 2b clinical trial (Study 1021, NCT01859988) 18 and 4 phase 3 trials: LIBERTY-AD SOLO 1 (NCT02277743) and SOLO 2 (NCT02277769), 19 LIBERTY-AD CHRONOS (NCT02260986), 24 and LIBERTY-AD CAFE (NCT02755649).	NCT01859988
	NCT02277743
	NCT02755649 Warning: study registration date March 2, 2016 is after study start date January 31, 2016

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
31 All analyses were conducted using SAS, version 9.2 or above (SAS Institute, Cary, NC).	SAS		
	SAS Institute		Suggestion: Statistical Analysis System, RRID:SCR_008567(link)

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
Comparisons between the dupilumab and placebo groups were conducted using the Cochran-Mantel-Haenszel test values after first rescue treatment used were set to missing (censoring) , and patients with missing assessment were considered nonresponders .	Cochran-Mantel-Haenszel test
The relationships between paindiscomfort and other outcomes were evaluated using Spearman rank correlation coefficients , which were estimated post hoc .	Spearman rank correlation
Spearman coefficients (r) 0.10 to 0.29, 0.3 to 0.49, and greater than 0.50 indicate low, moderate, and strong associations, respectively. 30 Data were pooled across treatment arms and trials for the correlation analyses because the hypotheses being tested revolved around the relationship between improvements in pain and other outcomes regardless of why the improvement occurred (drug or placebo with or without TCS).	Spearman coefficients

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
