SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
not required.
Inclusion and Exclusion Criteria
not required.
Attrition
not required.
Sex as a biological variable
not detected.
Subject Demographics
Age: 2.2 Data collection We collected data on injuries between January 2005 to April 2019 (15 years) .
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.
Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
Since the normality of the dependent variable (injury rate) was not verified , we used the Kruskal-Wallis test to evaluate the variation of injury rate over species , families , year , season , and habitat .	Kruskal-Wallis test
Spearman's rank correlation coefficient was performed to check for the relationship between annual injury rate (calculated as the ratio of annual number of injured individuals (all species combined)/ overall abundance of waterbirds) and both waterbird species richness , and waterbird diversity (measured as Shannon–Weiner index of diversity , H) .	Spearman's rank correlation
To examine the degree of independence between body parts of shorebirds (leg or wing) injured counts and the two bird families (Scolopacidae and Charadriidae), and at the two different habitat categories (sand beach and rest of habitats combined) we used the Chi-square (χ2) test.	Chi-square (χ2) test

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
