SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IRB: Approval for each study was given by the Mayo Clinic Institutional Review Board and surveys were executed in compliance with applicable ethical standards of the Health Insurance Portability and Accountability Act and the Helsinki Declaration.
Consent: For both surveys, participant consent was provided and survey responses were anonymous.
Inclusion and Exclusion Criteria
not detected.
Attrition
not detected.
Sex as a biological variable
not detected.
Subject Demographics
Age: not detected.
Weight: not detected.
Randomization
Study 1: BFI and SAF fatigue comparison sample To validate the harmonized SAF fatigue item within the MPN-10, data were used from a randomized survey deployed in 2017 designed to test measure equivalence, validity, and reliability for the MFSAF v4.
Blinding
not detected.
Power Analysis
not detected.
Replication

not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
Statistical analysis Within study 1, agreement between BFI and SAF fatigue scores, and twice administered SAF fatigue scores, were assessed using Pearson correlations (r) and Bland-Altman methods.	Pearson correlations
MPN-10 TSS was computed using BFI and SAF fatigue items, separately, and Pearson correlation was computed between the TSS.	Pearson correlation
Order effects were evaluated using paired t-tests.	t-tests
Within study 2, known-groups validity was evaluated by comparing SAF fatigue between patients with and without reported splenomegaly using a t-test [8].	t-test

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
