Document Identifier: **PMC8579873**

SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
Consent: All participants, between the age of 18 and 80 years, including stroke patients and non-stroke subjects, were provided with written consent for study inclusion and offered information for the case report form (CRF).
IRB: The study was approved by the ethic committee at the Seventh Affiliated Hospital of Sun Yat-sen University , where all data collection occurred , complies with the principles of the Declaration of Helsinki.
Inclusion and Exclusion Criteria
The exclusion criteria were unstable vital signs, complications with severe chronic diseases which are difficult to complete clinical assessments, and contraindications for completing fundus photography.
Attrition
Eighty-six subjects were recruited from the outpatient department and the inpatient department of rehabilitation medicine at the Seventh Affiliated Hospital of Sun Yat-sen University from November 2019 to August 2020.
Sex as a biological variable
not detected.
Subject Demographics
Age: All participants, between the age of 18 and 80 years, including stroke patients and non-stroke subjects, were provided with written consent for study inclusion and offered information for the case report form (CRF).
Randomization
The preprocessed fundus images were randomly horizontally translated , flipped , randomly enlarged , miscut transformed and filled to increase the diversity of the training images .
Blinding
not detected.
Power Analysis
not detected.

Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
MATLAB 2019b (MathWorks , USA) was used for image preprocessing and segmentation , as presented in Figure 1 , via the Green channel , adaptive histogram equalization (AHE) , image binarization , and median filtering , to obtain the original and segmentation retinal vessel images .	MATLAB		Suggestion: MATLAB, RRID:SCR_001622(link)
Extract Features and Model Training Extracting image features and training machine learning models were implemented in Python 3.6 with OpenCV .	Python		
	OpenCV		Suggestion: OpenCV (RRID:SCR_015526)(link)

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
A two-sided t-test was used for statistical analysis, and P < 0.05 was considered statistically significant.	t-test

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
