SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IRB: The study was approved by the King Abdulaziz University Hospital Institutional Review Board (Number 381-17) and performed in accordance with relevant guidelines and regulations in Saudi Arabia and the Declaration of Helsinki.
Consent: Because of the type of the study, patient consent to review their medical records was not required by the King Abdulaziz University Hospital IRB.
Inclusion and Exclusion Criteria
Women with previous two or more cesarean sections, antenatal intrauterine fetal demise, breech presentation, induction of labor, estimated fetal weight >4 kg, and classical or low vertical uterine incision were excluded.
Attrition
not detected.
Sex as a biological variable
The hospital records of all women who were admitted to our hospital between January 1, 2011, and December 30, 2018, who had had a trial of labor after cesarean section were identified and reviewed.
Subject Demographics
Age: We included only women with singleton vertex pregnancies between 24–42 weeks of gestation who had one previous cesarean delivery and had undergone a trial of labor after cesarean section.
Weight: Women with previous two or more cesarean sections, antenatal intrauterine fetal demise, breech presentation, induction of labor, estimated fetal weight >4 kg, and classical or low vertical uterine incision were excluded.
Randomization
not detected.
Blinding
not detected.
Power Analysis

not detected.
Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
Statistical analysis was conducted with SAS 9.4 (SAS Institute, Cary, NC).	SAS Institute		Suggestion: Statistical Analysis System, RRID:SCR_008567(link)

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
For a categorical variable, the Cochran-Armitage trend test was used if it had two levels, or the Mantel-Haenszel test was used if it had more than two levels.	Cochran-Armitage trend test
	Mantel-Haenszel test
The normality test was performed for each of the continuous variables since all the variables are not normally distributed ($p<0.05$); the Jonckheere-Terpstra test was used to test trends.	Jonckheere-Terpstra test

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
