SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
Field Sample Permit: The sample collection was conducted from January to December 2015 and from April to October 2016.
Consent: Written informed consent was obtained from parents or legal guardians before data and specimen collection from the children.
IRB: The study protocol was reviewed and approved by the National Ethical Committee for Health Research, Burkina Faso (Deliberation No. 2014-11-130).
Inclusion and Exclusion Criteria
not detected.
Attrition
not detected.
Sex as a biological variable
not detected.
Subject Demographics
Age: For the present study, any febrile child (axillary temperature >=37.5degC measured at the time of enrolment) under 5 years of age attending one of the four primary healthcare facilities or the referral hospital of the health district of Nanoro was invited to participate in the study.
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.
Replication

Number: These data were double entered by two independent technicians and validated by the lab-manager.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
Data analysis The inhibition diameters for each antibiotic tested were recorded using Excel 2016.	Excel		

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
