SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IRB: Methods This was a prospective study approved by the institutional review board of LV Prasad eye institute (LEC--07--18--099)and the research adhered to the tenets of the Declaration of Helsinki.
Consent: Informed consent was obtained from all patients prior to enrollment.
Inclusion and Exclusion Criteria
Inclusion criteria: All patients above 21 years of age seeking corneal refractive procedure, with no periocular surgical/aesthetic treatment in the past 12 months.
Attrition
not detected.
Sex as a biological variable
not detected.
Subject Demographics
Age: Inclusion criteria: All patients above 21 years of age seeking corneal refractive procedure, with no periocular surgical/aesthetic treatment in the past 12 months.
Randomization
All photographs were randomly numbered and shown to the refractive surgeon as well as the oculoplastic surgeon in a masked manner.
Blinding
not detected.
Power Analysis
Sample size calculation As there is no literature available on unmasking of periorbital aesthetic abnormalities following the elimination of spectacles, we did a pilot project in which the periorbital aesthetic concerns with and without spectacles were studied in 30 subjects to calculate the prevalence.
Replication

not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
Photographs were cropped from trichion to menton vertically, and tragus to tragus horizontally using the Adobe Photoshop CS6 version and standardized to 300 dpi resolution and 6 inch × 4 inch portrait size.	Adobe Photoshop		Suggestion: Adobe Photoshop, RRID:SCR_014199(link)

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
The Chi-square test was used to compare the proportions.	Chi-square test
Cohen’s kappa was used to look at the agreement between the two observers.[8] A P value of less than 0.05 was considered statistically significant	Cohen’s kappa

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
