SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
not required.
Inclusion and Exclusion Criteria
We excluded data on stillbirths due to concerns around confidentiality and excluded pregnancies which were missing postcodes so could not be linked with the WIMD data.
Attrition
not required.
Sex as a biological variable
Some women lived in England but gave birth in Welsh hospitals and these women were excluded from the analysis.
Subject Demographics
Weight: We included a variable for late booking which is a binary variable that equals to one if the mother had her first antenatal appointment after 12 weeks' gestation based on clinical guidelines for late booking26 or is equal to zero otherwise, a binary variable that equals to one if the mother reported being a smoker in the 12 months prior to conception, a binary variable that equals to one if the mother was classified as overweight/ obese (BMI greater than 25 kg/m2) at the first antenatal appointment using the WHO BMI cut-offs,27 parity which is measured as a continuous variable and age of the mother at birth which is measured as a continuous variable.
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.
Replication

not required.	
Code Information	
Identifiers: The data dictionary and code for the analysis are publicly available and can be accessed at the following link: https://github.com/heatherb1030/Assessing-the-relationship-between-Adverse-Pregnancy-Outcomes-and-Area-level-Deprivation-in-Wales-20.git. 10.1136/bmjopen-2021-052330.supp1 Supplementary data Pregnancy outcomes We evaluated the relationship between decile of area deprivation, eight domains of area-level deprivation (income, employment, health, education, access to services, housing, community safety and physical environment), and seven different adverse pregnancy outcomes: SGA: this was calculated using birth weight in grams, gestational age and sex of the baby.	https://github.com/heatherb1030/Assessing-the-relationship-between-Adverse-Pregnancy-Outcomes-and-Area-level-Deprivation-in-Wales-20.git

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.

For a full description of scored criteria and tips for improving your score, please see https://www.scicrunch.com/sciscorereport-faq
