SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IRB: All procedures were performed on a human volunteer following the regulations and guidelines approved by Institutional Review Board of Pukyong National University.
Inclusion and Exclusion Criteria
not detected.
Attrition
not detected.
Sex as a biological variable
not detected.
Subject Demographics
Age: Where variables L1, L2, L3, L4, L5, L6 refer to the image size (w × h) at the level of different compression depth.
Randomization
For training process, 60 images were chosen randomly from D1 dataset.
Blinding
not detected.
Power Analysis
not detected.
Replication
The process was repeated twice to reach the bottommost convolution block, which is still built with two convolution layers without max-pooling.
Number: The process was repeated twice to reach the bottommost convolution block, which is still built with two convolution layers without max-pooling.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
The motion control, laser pulsing and data acquisition are synchronized using LabVIEW software.	LabVIEW		Suggestion: LabView (RRID:SCR_014325)(link)
TensorFlow [48] is used in implementing the proposed DL approach .	TensorFlow		Suggestion: tensorflow (RRID:SCR_016345)(link)
The networks were set up using Python 3.7 in Keras with a TensorFlow backend.	Python		Suggestion: python-bx (RRID:SCR_024202)(link)

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.

For a full description of scored criteria and tips for improving your score, please see https://www.scicrunch.com/sciscorereport-faq
