SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IRB: The use of CCAE was reviewed by the New England Institutional Review Board and determined to be exempt from broad institutional review board approval, as this research project did not involve human patient research.
Inclusion and Exclusion Criteria
Patients who were exposed to both first-generation and second-generation antipsychotics on their index date were excluded.
Attrition
not detected.
Sex as a biological variable
not detected.
Subject Demographics
Age: Methods Data Sources Data for this study were obtained from the IBM MarketScan(r) Commercial Database (CCAE), a large, nationally representative, US health claims database of patients < 65 years of age that includes data for active employees, early retirees, Consolidated Omnibus Budget Reconciliation Act continuers, and their dependents who are insured by employer-sponsored plans.
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.
Replication
not required.

Data Information
Availability: The code lists used for identifying first-generation antipsychotics , haloperidol , second-generation antipsychotics , and stroke are available in the protocol , which is pre-registered at https:clinicaltrials.govct2showNCT04002700 and is publicly available in greater detail at https:github.comohdsi-studiesStrokeRiskInApUserstreemasterdocuments .

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
That end date for the post-hoc analysis was selected to reflect the end date of the Sentinel study 12 , whose end date coincided with the switch of many US healthcare databases from ICD-9-CM to ICD-10-CM.	US healthcare		

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.

For a full description of scored criteria and tips for improving your score, please see https://www.scicrunch.com/sciscorereport-faq
