SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IRB: 24 We obtained approval from Institutional Research and Ethics Committee (approval 0003297) at Moi University in Kenya.
Consent: All participants provided written informed consent prior to enrollment in this study.
Inclusion and Exclusion Criteria
We excluded variables with limited variability, multicollinearity and a high proportion of missingness (>10) from adjusted analysis.
Attrition
The survey was piloted among a predetermined number of n = 10 patients with unsuppressed viral load, who were not part of the main study sample.
Sex as a biological variable
Socio-demographic characteristics included age in years, sex (male vs female), years in HIV care and disclosed HIV status to anyone (yes vs no).
Subject Demographics
Age: not detected.
Weight: not detected.
Randomization
In addition, they each had 5 clinic officers (equivalent to physician assistants in the US) providing day to day clinical care to patients living with HIV. Study Design We conducted a cross-sectional study as part of the baseline assessment of a pilot randomized control trial that aimed to promote patient engagement through an enhanced patient care intervention.
Blinding
not detected.
Power Analysis
not detected.

Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
