Materials Design Analysis Reporting (MDAR) Checklist for Authors

The MDAR framework establishes a minimum set of requirements in transparent reporting applicable to studies in the life sciences (see Statement of Task: doi:10.31222/osf.oio/9sm4x.). The MDAR checklist is a tool for authors, editors and others seeking to adopt the MDAR framework for transparent reporting in manuscripts and other outputs. Please refer to the MDAR Elaboration Document for additional context for the MDAR framework.

Materials

Antibodies	Yes (indicate where provided: page no/section/legend)	n/a
For commercial reagents, provide supplier name, catalogue number and RRID, if available	No antibodes detected. Please add identifiers for all resources where possible	

Cell Materials	Yes (indicate where provided: page no/section/legend)	n/a
Cell lines: Provide species information, strain. Provide accession number in repository OR supplier name, catalog number, clone number, OR RRID	No cell lines detected Please add identifiers for all resources where possible	
Primary cultures: Provide species, strain, sex of origin, genetic modification status.	Not currently checked by SciScore	

Experimental Animals	Yes (indicate where provided: page no/section/legend)	n/a
Laboratory animals: Provide species, strain, sex, age, genetic modification status. Provide accession number in repository OR supplier name, catalog number, clone number, OR RRID	No organisms detected Please add identifiers for all resources where possible	
Animal observed in or captured from the field: Provide species, sex and age where possible	Not currently checked by SciScore	
Model organisms: Provide Accession number in repository (where relevant) OR RRID	See laboratory animals section for information.	

Plants and microbes	Yes (indicate where provided: page no/section/legend)	n/a
Plants: provide species and strain, unique accession number if available, and source (including location for collected wild specimens)	Not currently checked by SciScore	
Microbes: provide species and strain, unique accession number if available, and source	Not currently checked by SciScore	

Human research participants	Yes (indicate where provided: page no/section/legend)	n/a
Identify authority granting ethics approval (IRB or equivalent committee(s), provide reference number for approval.	Subjects provided written informed consent to participate in the study, which was approved by the Institutional Review Boards at the University of Southern California, and the University of California at Los Angeles.	
Provide statement confirming informed consent obtained from study participants.	Subjects provided written informed consent to participate in the study, which was approved by the Institutional Review Boards at the University of Southern California, and the University of California at Los Angeles.	
Report on age and sex for all study participants.	**Age:**MATERIALS AND METHODS PD individuals and clinical assessments The PD individuals for this cross-sectional study included 24 physically active, non-demented and ambulatory individuals with PD (15 males9 females, mean age 65.5 years, range 51 -88 years) with Hoehn and Yahr equal to II and years of diagnosis 4.9 + - 3.3. **Sex:**MATERIALS AND METHODS PD individuals and clinical assessments The PD individuals for this cross-sectional study included 24 physically active, non-demented and ambulatory individuals with PD (15 males9 females,	

Human research participants	Yes (indicate where provided: page no/section/legend)	n/a
	mean age 65.5 years, range 51 -88 years) with Hoehn and Yahr equal to II and years of diagnosis 4.9 + - 3.3.	

Design

Study protocol	Yes (indicate where provided: page no/section/legend)	n/a
For clinical trials, provide the trial registration number OR cite DOI in manuscript.	Not detected.	

Laboratory protocol	Yes (indicate where provided: page no/section/legend)	n/a
Provide DOI or other citation details if detailed step-by-step protocols are available.	Not detected.	

Experimental study design (statistics details)	Yes (indicate where provided: page no/section/legend)	n/a
State whether and how the following have been done, or if they were not carried out		
Sample size determination	not detected.	
Randomization	ICs with Iq value below 0.8 were excluded from further analysis as lower Iq indicates that the likelihood that the IC is randomly produced is higher 44.	
Blinding	not detected.	
inclusion/exclusion criteria	Inclusion and exclusion criteria were determined through chart review, participant interview, and physical and neurological screening performed by a board-certified neurologist with movement disorder expertise (GP).	

Sample definition and in-laboratory replication	Yes (indicate where provided: page no/section/legend)	n/a
State number of times the experiment was replicated in laboratory	To ensure stability of estimation, ICA algorithm was repeated 100 times in ICASSO and the agglomerative hierarchical clustering with average-linkage criterion was used for calculating the cluster quality index (Iq) of the estimated ICs 43.	
Define whether data describe technical or biological replicates	Not detected.	

Ethics	Yes (indicate where provided: page no/section/legend)	n/a
Studies involving human participants: State details of authority granting ethics approval (IRB or equivalent committee(s), provide reference number for approval.	Subjects provided written informed consent to participate in the study, which was approved by the Institutional Review Boards at the University of Southern California, and the University of California at Los Angeles.	
Studies involving experimental animals: State details of authority granting ethics approval (IRB or equivalent committee(s), provide reference number for approval.	Not detected.	
Studies involving specimen and field samples: State if relevant permits obtained, provide details of authority approving study; if none were required, explain why.	Identification of remaining ICs was carried out by regression-based spatial sorting to reference standard network templates from Allen and colleagues 20 as well as knowledge from established brain networks described in previous studies 20, 46-50.	

Dual Use Research of Concern (DURC)	Yes (indicate where provided: page no/section/legend)	n/a
If study is subject to dual use research of concern, state the authority granting approval and reference number for the regulatory approval	Not currently checked by SciScore	

Analysis

Attrition	Yes (indicate where provided: page no/section/legend)	n/a
State if sample or data point from the analysis is excluded, and whether the criteria for exclusion were determined and specified in advance.	The first four images were automatically discarded by the scanner to allow for the establishment of steady-state magnetization.	

Statistics	Yes (indicate where provided: page no/section/legend)	n/a
Describe statistical tests used and justify choice of tests.	Components averaged across all subjects were calculated with a one-sample t-test in SPM12b and thresholded at family-wise error rate (FWE-corrected $p < 0.05$).	

Data availability	Yes (indicate where provided: page no/section/legend)	n/a
State whether newly created datasets are available, including protocols for access or restriction on access.	Not detected.	
If data are publicly available, provide accession number in repository or DOI or URL.	Not detected.	
If publicly available data are reused, provide accession number in repository or DOI or URL, where possible.	Not detected.	

Code availability	Yes (indicate where provided: page no/section/legend)	n/a
For all newly generated code and software essential for replicating the main findings of the study:		
State whether the code or software is available.	Not detected.	
If code is publicly available, provide accession number in repository, or DOI or URL.	Not detected.	

Analysis

Adherence to community standards	Yes (indicate where provided: page no/section/legend)	n/a
MDAR framework recommends adoption of discipline-specific guidelines, established and endorsed through community initiatives. Journals have their own policy about requiring specific guidelines and recommendations to complement MDAR.		
State if relevant guidelines (eg., ICMJE, MIBBI, ARRIVE) have been followed, and whether a checklist (eg., CONSORT, PRISMA, ARRIVE) is provided with the manuscript.	Not currently checked by SciScore
