SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
Euthanasia Agents: The stained ovules embryos were mounted in a drop of chloral hydrate in a well generated by SecureSeal round imaging spacers (20mm , Thermofisher) and observed by confocal microscopy taking z stack images .
Inclusion and Exclusion Criteria
not detected.
Attrition
not detected.
Sex as a biological variable
not detected.
Subject Demographics
Age: not detected.
Weight: not detected.
Randomization
For quantification of cytoplasmic Lifeact-tdTomato signal , 4-mm region of interests (ROIs) (n = 30) across the confocal sections from the raw image stack of the embryo were selected randomly for fluorescence intensity measurements .
Blinding
not detected.
Power Analysis
not detected.
Replication
not required.

Data Information	
Availability: Materials availability DNA constructs and transgenic Arabidopsis seeds generated in this study are available from the lead contact , Dolf Weijers , upon request .	
Identifiers: Deposited data Microarray This study GEO: GSE165986	GSE165986

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
