Materials Design Analysis Reporting (MDAR) Checklist for Authors

The MDAR framework establishes a minimum set of requirements in transparent reporting applicable to studies in the life sciences (see Statement of Task: doi:10.31222/osf.oio/9sm4x.). The MDAR checklist is a tool for authors, editors and others seeking to adopt the MDAR framework for transparent reporting in manuscripts and other outputs. Please refer to the MDAR Elaboration Document for additional context for the MDAR framework.

Materials

Antibodies	Yes (indicate where provided: page no/section/legend)	n/a
For commercial reagents, provide supplier name, catalogue number and RRID, if available	No antibodes detected. Please add identifiers for all resources where possible	

Cell Materials	Yes (indicate where provided: page no/section/legend)	n/a
Cell lines: Provide species information, strain. Provide accession number in repository OR supplier name, catalog number, clone number, OR RRID	No cell lines detected Please add identifiers for all resources where possible	
Primary cultures: Provide species, strain, sex of origin, genetic modification status.	Not currently checked by SciScore	

Experimental Animals	Yes (indicate where provided: page no/section/legend)	n/a
Laboratory animals: Provide species, strain, sex, age, genetic modification status. Provide accession number in repository OR supplier name, catalog number, clone number, OR RRID	No organisms detected Please add identifiers for all resources where possible	
Animal observed in or captured from the field: Provide species, sex and age where possible	Not currently checked by SciScore	
Model organisms: Provide Accession number in repository (where relevant) OR RRID	See laboratory animals section for information.	

Plants and microbes	Yes (indicate where provided: page no/section/legend)	n/a
Plants: provide species and strain, unique accession number if available, and source (including location for collected wild specimens)	Not currently checked by SciScore	
Microbes: provide species and strain, unique accession number if available, and source	Not currently checked by SciScore	

Human research participants	Yes (indicate where provided: page no/section/legend)	n/a
Identify authority granting ethics approval (IRB or equivalent committee(s), provide reference number for approval.	Materials and Methods This register-based clinical study was written by following the Strengthening the Reporting of Observational Studies in Epidemiology (STROBE) guidelines. 13 This clinical study was performed in a private clinic in Lisbon, Portugal between July 2012 and December 2014, and it was approved by an independent ethical committee (Ethical Committee for Health, Lisbon, Portugal authorization no. 0052012).	
Provide statement confirming informed consent obtained from study participants.	All procedures were performed with the adequate and understanding and written consent from all participants included in the study.	
Report on age and sex for all study participants.	**Age:**There was a total of 3,675 patients included in this study (2,186 females and 1,489 males average age = 51.4 years range = 18-97 years). **Sex:**There was a total of 3,675 patients included in this study (2,186 females and 1,489 males average age = 51.4 years range = 18-97 years).	

Design

Study protocol	Yes (indicate where provided: page no/section/legend)	n/a
For clinical trials, provide the trial registration number OR cite DOI in manuscript.	Not detected.	

Laboratory protocol	Yes (indicate where provided: page no/section/legend)	n/a
Provide DOI or other citation details if detailed step-by-step protocols are available.	Not detected.	

Experimental study design (statistics details)	Yes (indicate where provided: page no/section/legend)	n/a
State whether and how the following have been done, or if they were not carried out		
Sample size determination	not detected.	
Randomization	not detected.	
Blinding	not detected.	
inclusion/exclusion criteria	The inclusion criteria were patients that presented permanent teeth without active carious lesions at the first diagnostic appointment.	

Sample definition and in-laboratory replication	Yes (indicate where provided: page no/section/legend)	n/a
State number of times the experiment was replicated in laboratory	Not detected.	
Define whether data describe technical or biological replicates	Not detected.	

Ethics	Yes (indicate where provided: page no/section/legend)	n/a
Studies involving human participants: State details of authority granting ethics approval (IRB or equivalent committee(s), provide reference number for approval.	Materials and Methods This register-based clinical study was written by following the Strengthening the Reporting of Observational Studies in Epidemiology (STROBE) guidelines. 13 This clinical study was performed in a private clinic in Lisbon, Portugal between July 2012 and December 2014, and it was approved by an independent ethical committee (Ethical Committee for Health, Lisbon, Portugal authorization no. 0052012).	
Studies involving experimental animals: State details of authority granting ethics approval (IRB or equivalent committee(s), provide reference number for approval.	Not detected.	
Studies involving specimen and field samples: State if relevant permits obtained, provide details of authority approving study; if none were required, explain why.	Not detected.	

Dual Use Research of Concern (DURC)	Yes (indicate where provided: page no/section/legend)	n/a
If study is subject to dual use research of concern, state the authority granting approval and reference number for the regulatory approval	Not currently checked by SciScore	

Analysis

Attrition	Yes (indicate where provided: page no/section/legend)	n/a
State if sample or data point from the analysis is excluded, and whether the criteria for exclusion were determined and specified in advance.	The information collected from the sample is outlined in Table 1 and included demographic variables (age and gender), socioeconomic status evaluated from the occupation of each patient according to Goldthorpe classification (socioeconomic status 1: higher managerial, administrative, and professional occupations socioeconomic status 2: intermediate occupations socioeconomic status 3: routine and manual occupations), 14 recall regimen (average frequency of 6 months between dental hygiene appointments), systemic compromise status (absence, n = 2,692 patients presence, n = 983 patients: hepatitis, n = 26 patients cardiovascular, n = 636 patients thyroid, n = 128 patients diabetes, n = 104 patients rheumatological, n = 174 patients HIV+, n = 6 patients oncological, n = 40 patients inflammatory, n = 10 patients neurological, n = 13 patients autoimmune, n = 5 patients renal, n = 3 patients genetic, n = 3 patients Sjogren syndrome, n = 1 patient more than one condition: n = 157 patients), smoking status (nonsmoker smoker), and dental caries status (absence or presence)	

Statistics	Yes (indicate where provided: page no/section/legend)	n/a
Describe statistical tests used and justify choice of tests.	Differences between survival curves were determined by using the log-rank test.	

Data availability	Yes (indicate where provided: page no/section/legend)	n/a
State whether newly created datasets are available, including protocols for access or restriction on access.	Not detected.	
If data are publicly available, provide accession number in repository or DOI or URL.	Not detected.	
If publicly available data are reused, provide accession number in repository or DOI or URL, where possible.	Not detected.	

Code availability	Yes (indicate where provided: page no/section/legend)	n/a
For all newly generated code and software essential for replicating the main findings of the study:		
State whether the code or software is available.	Not detected.	
If code is publicly available, provide accession number in repository, or DOI or URL.	Not detected.	

Analysis

Adherence to community standards	Yes (indicate where provided: page no/section/legend)	n/a
MDAR framework recommends adoption of discipline-specific guidelines, established and endorsed through community initiatives. Journals have their own policy about requiring specific guidelines and recommendations to complement MDAR.		
State if relevant guidelines (eg., ICMJE, MIBBI, ARRIVE) have been followed, and whether a checklist (eg., CONSORT, PRISMA, ARRIVE) is provided with the manuscript.	Not currently checked by SciScore
