Document Identifier: **PMC8647244**

# SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

**Table 1: Rigor Adherence Table**

| |
|---|
| Ethics |
| Consent: Because no patients or controls were directly involved in this meta-analysis , patient consent and ethical approval were not necessary . |
| Inclusion and Exclusion Criteria |
| Inclusion and exclusion criteria The main inclusion criteria of the selected studies were that they must contain comparative genotypic information and detailed data regarding IL-1β rs1143634 ( +3954C>T ) polymorphism in both patients with cancer and control populations . |
| Attrition |
| Because no patients or controls were directly involved in this meta-analysis , patient consent and ethical approval were not necessary . |
| Sex as a biological variable |
| not detected. |
| Subject Demographics |
| Age: not detected. |
| Weight: not detected. |
| Randomization |
| not detected. |
| Blinding |
| not detected. |
| Power Analysis |
| We first determined the required information size ( RIS ) and defined the monitoring boundaries by setting the following criteria: 1 ) 95 % CI with a p-value <0.05 , 2 ) 20 % relative risk reduction , 3 ) 80 % statistical power and 4 ) 5 % type I error . |
| Replication |

| | |
|---|---|
| not required. | |
| Data Information | |
| Identifiers: The selected key terms included cancer , interleukin-1 beta , rs1143634 ( +3954C>T) | rs1143634 |

**Table 2: Key Resources Table**

| Your Sentences | REAGENT or RESOURCE | SOURCE | IDENTIFIER |
|---|---|---|---|
| Software and Algorithms | | | |
| Materials and methods Literature search strategy Multiple authorized electronic databases (PubMed, Google Scholar | PubMed | | Suggestion: PubMed (RRID:SCR_004846)( link) |
| | Google Scholar | | Suggestion: Google Scholar (RRID:SCR_008878)( link) |
| , CNKI , Web of Science and EMBASE ) were comprehensively searched for related literature using specific key terms up to May 2021 . | EMBASE | | Suggestion: EMBASE (RRID:SCR_001650)( link) |
| , Version 5.4 ( The Cochrane Collaboration , 2020) . | Cochrane Collaboration | | |
| We used Review Manager ( RevMan 5.4 ) to perform the overall statistical data analysis . | RevMan | | Suggestion: RevMan (RRID:SCR_003581)( link) |

**Other Entities Detected**

| Your Sentences | Recognized Entity |
|---|---|
| Statistical Tests | |
| If heterogeneity was significant ( p-value <0.10) , a random-effect model was applied , and when heterogeneity was not significant , the fixed-effect model ( Mantel–Haenszel ) was applied. | Mantel–Haenszel |
| The Begg & Mazumdar test and Egger's regression test were carried out to estimate publication biases . | Mazumdar test |
| | Egger's regression test |

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
