Document Identifier: **PMC8655566**

SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
not required.
Inclusion and Exclusion Criteria
We excluded admissions where the patients age was <20 years, residential location was unknown, interstate or overseas, and admissions to private hospitals.
Attrition
17 The AUSLAB database included 208 220 results linked to this time period and patient cohort 27 580 were excluded because they were not linked to an admission in the parent cohort 21 672 were excluded based on age, residence outside Queensland, or private hospital admission.
Sex as a biological variable
not detected.
Subject Demographics
Age: Adult patients younger than 20 years of age were excluded because the Statistical Analysis Linkage Unit only provided age groups (5-year age group, capped at 75+ years) and we could not identify adult patients within the 15-20 years age group.
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.
Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
Statistical methods Analyses were conducted using StataSE (V.15 Stata) and JMP Pro V.14.1.0 (SAS Institute).	SAS Institute		Suggestion: Statistical Analysis System, RRID:SCR_008567(link)

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
Categorical variables were presented as numbers and percentages and the kh2 test was used to compare categorical variables (Fishers exact test was used when one of the expected values in a table was less than 5).	kh2 test
	Fishers exact test

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
