SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IRB: This retrospective study was approved by the institutional ethical committee of Kobe University Hospital (B200049), and written informed consent was obtained at the time of initial treatment.
Consent: This retrospective study was approved by the institutional ethical committee of Kobe University Hospital (B200049), and written informed consent was obtained at the time of initial treatment.
Inclusion and Exclusion Criteria
not detected.
Attrition
not detected.
Sex as a biological variable
Six men and ten women were included in this analysis, with an average age of 53 (range, 10-74) years.
Subject Demographics
Age: Median follow-up period after treatment was 22 months (range: 1-99 M).
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.
Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
Statistical analyses were performed using JMP version 13 (SAS Institute, Cary, North Carolina).	SAS Institute		Suggestion: Statistical Analysis System, RRID:SCR_008567(link)

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
Survival outcomes were calculated using the Kaplan-Meier method, with prognostic factors determined by the log-rank test.	log-rank test

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
