SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
not required.
Inclusion and Exclusion Criteria
The simulated IGF-1 weekly profiles with dosing intervals less than 7.0 days of a dosing week were excluded for the final model, to remove the bias caused by earlier dosing, so that the prediction of the steady state profile includes data from full 7.0 days without the interruption of earlier dosing.
Attrition
not required.
Sex as a biological variable
not required.
Subject Demographics
Age: not required.
Weight: not required.
Randomization
Methods Clinical Trial Design and Patient Population for Model Development Trial CT-004 CT-004 was a phase 2, randomized, open-label trial of 3 different doses (0.14, 0.21, or 0.30 mg hGHkgweek) of once-weekly ACP-001 (a bioequivalent predecessor of lonapegsomatropin data on file TransCon hGH in this manuscript refers to both ACP-001 and lonapegsomatropin), compared to daily somatropin (Genotropin) over a period of 26 weeks in treatment-naive children with GHD (N = 53).
Blinding
not detected.
Power Analysis
not detected.
Replication

not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
The model was fitted in SAS version 9.4 (SAS Institute Inc., Cary, NC, USA) with the proc mixed procedure.	SAS Institute		Suggestion: Statistical Analysis System, RRID:SCR_008567(link)

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
