Document Identifier: **PMC8672318**

SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IRB: Ethical approval Before conducting this study, formal approval was obtained from the Medical Research Ethics Committee of the Faculty of Medicine, Menoufia University, Egypt.
Inclusion and Exclusion Criteria
not detected.
Attrition
not detected.
Sex as a biological variable
not detected.
Subject Demographics
Age: not detected.
Weight: not detected.
Randomization
not detected.
Blinding
not detected.
Power Analysis
The sample size was calculated among each Faculty from the following equation for this cross-sectional study where n= the sample size Z=standard error associated with the chosen confidence level (1.96) p=estimated percentage in the population q=100-p and e = acceptable sample error (5) Based on a previous study (10), with 95 CI and 80 power, using the Raosoft sample size calculator and assuming a marginal error of 0.05.
Replication
not required.

Cell Line Authentication	
Authentication: Workaholism was assessed using the validated Dutch Workaholism Scale (DUWAS).	
Data Information	
Identifiers: For this study, eight questions related to sleep problems were selected based on previous epidemiological studies, 14,29,30 namely: difficulty initiating sleep (DIS) difficulty maintaining sleep (DMS) early morning awakening (EMA) dozing off or napping in the daytime insufficiency of sleep excessive daytime sleepiness (EDS) at work difficulty awakening in the morning (DAM) and tiredness upon awakening in the morning.	14,29,30

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
Ten percent of participants were added to avoid censored cases, the total number of studied staff members for both Faculties of Medicine and Arts was 232 and 104 respectively.	Arts		
Data management Data were analyzed using IBM SPSS advanced statistics v.	SPSS		Suggestion: SPSS, RRID:SCR_002865(link)

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
The relationships between qualitative variables (sleep problems, different workaholic groups and types of work) are examined by Chi-square test.	Chi-square test

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
