SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics	
not required.	
Inclusion and Exclusion Criteria	
not required.	
Attrition	
not required.	
Sex as a biological variable	
According to the 2007 national census, there were 198,095 people in the district, 101,596 men and 96,499 women, and its urban population was 16,862.	
Subject Demographics	
Age: Inclusion and Exclusion Criteria All those >18 years old visiting community drug outlets for illness within the past one month of the study period were included.	
Randomization	
Each study participant was nominated using systematic random sampling considering inclusion criteria.	
Blinding	
not detected.	
Power Analysis	
not detected.	
Replication	
not required.	
Data Information	
Identifiers: Sample-Size Determination Sample size was determined using the single population-proportion formula (documentclass12ptminimal	studies,2,10,39

Identifiers: Following a thorough assessment of the literature, a four-part questionnaire was created.1,19,39 To maintain uniformity, the survey was written in English and then translated into local languages before being returned to English by language experts and researchers.	created.1,19,39

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
The information was then entered into EpiData 3.1, and SPSS 23 was used for analysis.	SPSS		Suggestion: SPSS, RRID:SCR_002865(link)

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
