SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
not required.
Inclusion and Exclusion Criteria
Records then were evaluated for inclusion criteria: a diagnosis of AP on thoracic radiographs (minimum of 2 orthogonal views alveolar or interstitial pattern in ventrally-dependent lungs), 6 CBC, and BALF culture and cytology.
Attrition
not required.
Sex as a biological variable
not required.
Subject Demographics
Age: not required.
Weight: not required.
Randomization
not detected.
Blinding
2.2 Radiography Thoracic radiographs were evaluated in a blinded fashion by a single board-certified radiologist (Greg Almond).
Power Analysis
not detected.
Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
2.4 Statistics Statistical analysis was performed using commercial statistical software (SigmaPlot data analysis software, version 12.0).	SigmaPlot		

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
All data (patient demographics, risk factors for aspiration, clinicopathologic features, antimicrobial drug use and radiographic scores) were found to be nonnormally distributed using a Shapiro-Wilk test.	Shapiro-Wilk test
McNemars test was used to compare a veterinary medical (and separately, a human medical) diagnosis of b-AP between dogs receiving a single dose of antimicrobial drugs to those not receiving antimicrobial drugs before BALF collection.	McNemars test

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
