Document Identifier: **PMC8710854**

SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
Consent: Eligible participants provided written consent and self-administered a standardised questionnaire twice before and after the intervention.
Inclusion and Exclusion Criteria
Eligibility criteria of study participants The participants included local multiethnic English-literate Asian citizens or permanent residents, aged 21 years and above.
Attrition
not detected.
Sex as a biological variable
They comprised women with recent GDM who required postpartum T2DM screening.
Subject Demographics
Age: Eligibility criteria of study participants The participants included local multiethnic English-literate Asian citizens or permanent residents, aged 21 years and above.
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.
Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
9 27 The significance of differences between capillary and venous samples was examined by a two-sided paired t-test.	t-test
Pearsons rank correlation coefficient (r) was used for calculating correlation between all venous and capillary glucose measurements, and scatterplots were used to visualize the relationship between capillary and venous glucose measurements.	Pearsons rank correlation

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
