SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IRB: Procedure Ethical approval obtained from the Research Ethics Committee at KAUDH (086-10-17).
Consent: If they agreed, an Arabic consent form was signed by the participating parents.
Inclusion and Exclusion Criteria
All healthy two to-12-year-old children receiving dental treatment by a pediatric dentist during the study period in one of the included centers were eligible.
Attrition
not detected.
Sex as a biological variable
not detected.
Subject Demographics
Age: For part-1 of the study, healthy 2-12-years-old children who received dental treatment under N2O andor PB during the study period were compared to the total treated children in the same included centers to assess the prevalence.
Randomization
not detected.
Blinding
not detected.
Power Analysis
Sample size was calculated using OpenEpi online calculator with 80 power , 108 parents are required to analyze the proportions in a population of 800 with a 25 exposure.
Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
Statistical Analysis Statistical analysis was performed using SPSS version 20.	SPSS		Suggestion: SPSS, RRID:SCR_002865(link)

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
Chi-square tests were used with $p < 0.05$ and adjusted using post-hoc Bonferroni correction when assessing parental preference for N2O andor PB.	Chi-square tests
	Bonferroni
Additionally, a binary regression analysis was performed to assess significant relationships between predictors (child age, gender and parental socioeconomic status education and monthly family income) and child treatment under N2O alone (Group I) or PB with or without N2O (Group II and group III) as a dependent variable.	binary regression

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
