SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
not required.
Inclusion and Exclusion Criteria
not required.
Attrition
Eight of the participants worked full-time, 2 were working part-time, and 1 female participant was temporarily on sick leave due to an operation.
Sex as a biological variable
On the same day as FG interview number two, one male participant could not come.
Subject Demographics
Age: Participants In total, 18 individuals between 18 and 64 years were telephoned, and 12 orally consented to participate.
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.
Replication
Number: 31 Each transcript was compared with digital files at least twice.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
An inductive approach contributed to coding the essence of what was interesting, first on hard copy and then in NVivo.	NVivo		Suggestion: NVivo (RRID:SCR_014802)(link)

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
