SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
not required.
Inclusion and Exclusion Criteria
These dates were selected to exclude periods of time (eg, 2013) when other, non-dialysate-related changes to the management of mineral bone disease were implemented across large dialysis organizations.
Attrition
not required.
Sex as a biological variable
not detected.
Subject Demographics
Age: For inclusion in the analysis, patients had to be in-center hemodialysis patients at a Fresenius Kidney Care facility and aged 18 to 89 years on the index date.
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.
Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
All analyses were carried out with SAS software version 9.4 (SAS Institute Inc, Cary, NC, USA).	SAS		
	SAS Institute		Suggestion: Statistical Analysis System, RRID:SCR_008567(link)

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
Comparisons of demographics between CAD and AAD clinics were performed using a 2-sample t-test for continuous variables and chi-square test for categorical variables.	t-test
	chi-square test
Comparisons of data between baseline and follow-up within the clinic were made using paired t-tests and McNemar's tests for continuous and categorical variables.	t-tests
	McNemar's tests

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
