SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IRB: After confirming the research in the ethics committee (IR.MUMS.REC.1396.337) and obtaining a sampling permit, the researcher referred to health centers, and pregnant mothers were invited to participate in the research.
Consent: Individuals then completed a written consent to participate in the study if they met the inclusion criteria.
Inclusion and Exclusion Criteria
Study participants and sampling The samples were entered into the study by available sampling method and if they had inclusion criteria and no exclusion criteria.
Attrition
not detected.
Sex as a biological variable
Materials and Methods Study design and setting The present study was a descriptive correlational study that was performed to determine the relationship between mindfulness and maternal-fetal attachment on 500 pregnant mothers referred to health centers affiliated to Isfahan University of Medical Sciences.
Subject Demographics
Age: not detected.
Weight: not detected.
Randomization
At first, three centers of Nawab, Amir Hamzeh, and Motahhari were randomly selected from among the health centers in Isfahan, and then pregnant women were included in the study by available sampling method.
Blinding
not detected.
Power Analysis
not detected.

Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
The obtained information was then coded and entered into SPSS software and analyzed by SPSS software version 22 (IBM Company, Armonk, NY, USA).	SPSS		Suggestion: SPSS, RRID:SCR_002865(link)

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
Initially, the normality of the data was determined by Kolmogorov–Smirnov and Shapirovilk tests.	Kolmogorov–Smirnov
	Shapirovilk tests
Data were analyzed using descriptive and analytical statistical tests (Spearman and regression).	Spearman

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
